Most children with Down syndrome (DS) do not have a psychiatric or neurobehavioral disorder. Current prevalence estimates of neurobehavioral and psychiatric co morbidity in children with DS range from 18% to 38%. We have found it useful to distinguish conditions with a pre pubertal onset from those presenting in the post pubertal period, as these are

Behavioral and Attachment

Considerations in Neurobehavioral disorders in Children with Learning Disabilities: In this module, there will be a focus on attachment, behavioral and learning disorders which involve both right and left brain networks, and how to use digital medicine. This module is one of the most powerful modules in this program because it will provide a complete and expert understanding of normal and abnormal human behavior and relationships and how to specifically change ...
