- Bing Some minerals, like  
talc and muscovite, form  
when existing minerals are  
subject to changes in  
pressure and temperature.  
For example, an increase in  
pressure can cause the atoms  
of a mineral to be  
rearranged to form a more  
compact mineral. Section 22

~~Earth Science Chapter 2~~  
~~Minerals Section 2.2~~  
~~Minerals ...~~

Some minerals, including gold and diamond, are made of single elements. But most minerals are chemical compounds that are made of two or more elements.

Different minerals may contain many of the same elements. Elements commonly found in minerals include oxygen, silicon, and calcium. However, each mineral has a specific chemical composition.
